

Golang Developer

Hi there! My name is Bogdan and I'm a golang developer. I'm ready to work hard, to learn and to make needed products. I get along well with people, I can sense what people want from me and I also like to find material to study on my own, for example, some documentation about new technologies. And I do it in the shortest possible time!

My stack

- Technologies
PostgreSQL, Redis, Kafka, Golang, Docker, Swagger
- Protocols and other technologies
REST API, HTTP, HTTPS, gRPC, HLS, RTMP, Linux
- Languages
Russian (native), English - B1

Description of what I worked with

I've been intensively studying programming for the last year and a half. I haven't started from a clear head, because I have a programmer dad and he gave me the base of programming in my childhood. My first programming language was **Oberon** (based on **Pascal**), but a year and half ago I started learning **Python** and a year ago I started learning **Go**. I have completed a few projects and learned a lot of technologies. Here is some of them:

- Sport Games

For example, I've made a service for registration and creating sports games. I have made a service that allows potential participants to register for sports games, and allows the organizer of those games to manage the participants, collect payments and send notifications. Here it is: t.me/RegistrationToGames_bot. It is made using **microservice architecture** and utilizes. I've made it in microservices architecture and I've used these tools: **PostgreSQL, Redis, Kafka**.

- Make Events

I've made another service for just some events from different people using **Google Forms** and **Google Sheets**. It can notify you (or someone) who decided to be at the event. You can check it out here: t.me/testdatbot_bot.

- Birthday Notificator

I've also made a service that has cool functionality to notify someone by email about someone's birthday. It has a subscription and authorization function. It was built in **microservices architecture** as well. If you want to check: <https://github.com/l1qwie/Congratulations>
